★ WANTED ★

88fits

DRAG · DODGE · SURVIVE

A one-thumb survivor-shooter for phones held upright, in a painted desert that wants you dead.

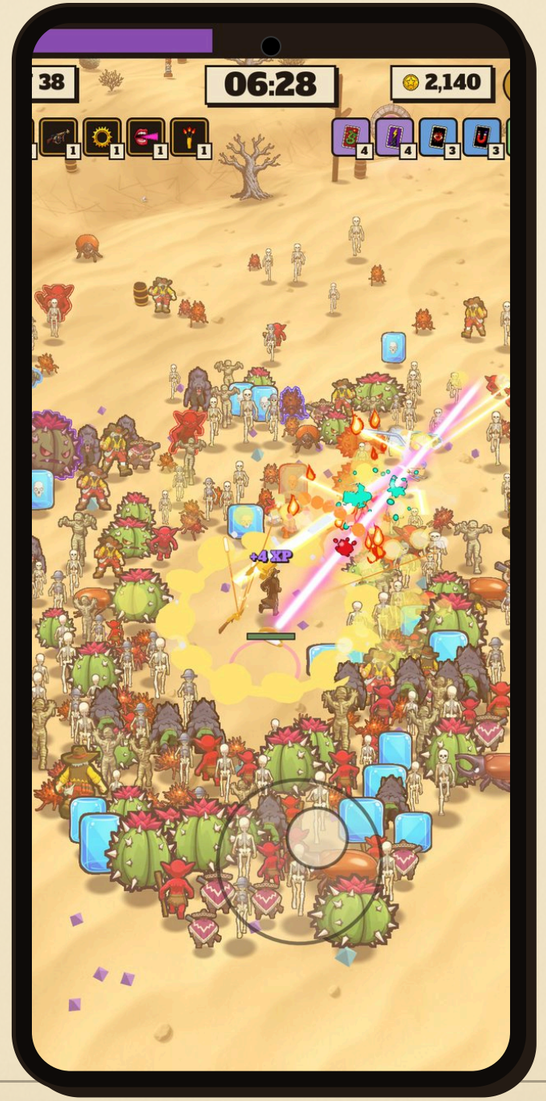

KICK-OFF ONE PAGER V001 · 26 OCT 2026 · CONCEPT ART

Megabonk's run, held upright, under one thumb

88fits is a survivor-shooter for a phone held upright: drag to run, and the guns aim themselves.

A small, goofy hero crosses a painted desert on real 3D ground while hundreds of creatures pour in. Every level-up deals three cards, and the build mutates and evolves. A stage lasts 7 to 13 minutes and ends with a boss, a portal and a choice: bank the gold, or stay for Endless.

GENRE	Survivor-like roguelite: painted heroes on 3D ground
PLATFORMS	Android phones in portrait; Windows PC
CONTROLS	One thumb: a floating joystick, automatic fire
SESSION	7 to 13 minute stages, then Endless
AUDIENCE	18 to 45, players of Vampire Survivors, Survivor.io and Archero; Tier-1 English Android first
MODEL	Free to play, rewarded ads, small IAP later; the market test decides
ENGINE	Godot 4.7; every hero, item and creature is data

WHERE IT SITS

Survivor-likes on phones

portrait, one thumb

Megabonk's run on PC

stages, a boss, a portal

Phones are full of survivor-likes held upright, some of them 3D (Archero, Monster Survivors). Megabonk itself is on PC only. 88fits brings its kind of run, stages that end in a boss and a portal with shrines and quests on the way, to a phone held upright.

THE GENRE PAYS

1M copies in two weeks and 117,336 players at once: Megabonk, October 2025

$476M lifetime in-app revenue: Survivor.io (AppMagic, February 2026)

27M+ players on all platforms: Vampire Survivors (April 2026)

Frames from the current build, not mock-ups

Sundown: the Drifter against scorpions of every size, the two crowned ones Elites

Nightfall: fire ants and white beetles at the oasis

Blood Moon: imps and hellhounds charge Calavera

Six promises the whole game keeps

01

One thumb, zero menus

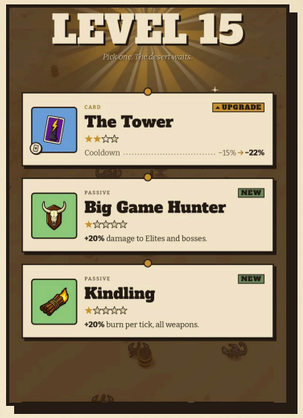

Every in-run action is hold, slide or tap. Anything that needs a second finger is cut or automated.

02

Portrait is the point

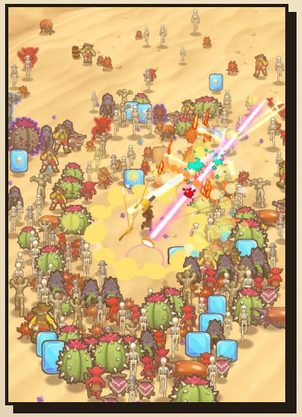

The tall screen shows more ahead than beside. Threat comes from the top, and steering through it is the skill.

03

Cards go brr

Five weapons, five cards, passive items without a cap, mutations and evolutions. Runs feel different because builds do.

04

A crowd, not a queue

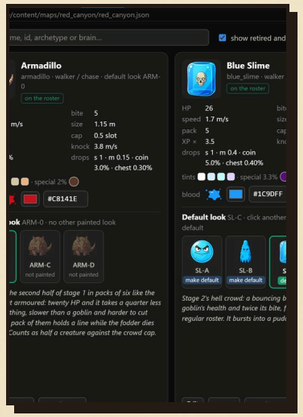

Dozens of creatures from the first minute and hundreds in Endless, each one a little different. A problem you can read.

05

Goofy and readable

Anime heroes and creatures painted as 2.5D cut-outs on real 3D ground. Silly on purpose, clear at a glance on a phone.

06

Content is data

A new weapon, creature or hero is a folder of data and pictures, never new code, made and tuned in our Level Editor.

Each reference lends one thing, and we say which

Megabonk 3D · THIRD PERSON · GOOFY

TAKE The tone, stages that end in a boss and a portal, unlocks earned by in-run challenges, an upgrade board, shrines worth a detour.

SKIP Parkour, jumping, landscape.

Vampire Survivors 2D · THE GENRE TEMPLATE

TAKE Auto-fire, five plus five slots, pick 1 of 3, evolutions opened at a chest, XP gems and the magnet, chests that spin.

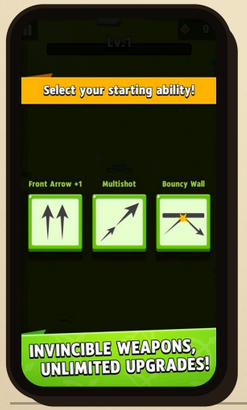

SKIP The 30-minute timer, the arcana, the item flood.

Brotato STAT TRANSPARENCY

TAKE Every number on show, with where it came from (our pause screen's Stats tab).

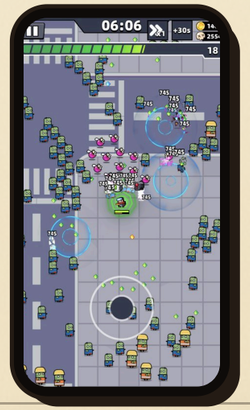

SKIP The shop between waves, discrete waves.

Archero PORTRAIT · ONE THUMB

TAKE Portrait HUD habits, full-width cards sized for thumbs, short chapters with a boss at the end, a title that is one big Play button.

SKIP Stop-to-shoot, rooms and doors, equipment gacha.

Survivor.io PORTRAIT VAMPIRE SURVIVORS

TAKE Proof the genre reads in portrait: the slim top strip, the floating joystick, a camera that never rotates.

SKIP The monetisation layers.

SCREENSHOTS: EACH GAME'S STORE PAGE (STEAM, GOOGLE PLAY AND THE GAMES' WIKIS; MEGABONK'S STAGE PORTAL FROM DESTRUCTOID)

Megabonk meets a Saturday-morning anime western

LAYER 1

Painted cut-outs

Heroes and creatures are painted, cel-shaded 2.5D sprites in eight directions: crisp line, flat saturated colour, a dark outline that holds on sand.

LAYER 2

Real 3D underneath

The ground, the guns, pickups, barrels and blasts are 3D, as in Megabonk; the cut-outs stand on it with real shadows.

Megabonk: the 3D field we take the feel from

LAYER 3

One bold object

Every icon is one object with a thick black outline, painted from our own 3D models where one exists.

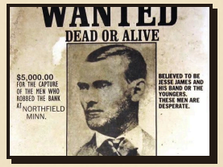

Shop Titans: the icon house style

LAYER 4

Wanted posters

The interface is printed paper: slab type, brass, wax seals and hard ink shadows, the same on every screen.

The classic wanted-poster look (Jesse James poster, Wikimedia Commons, public domain)

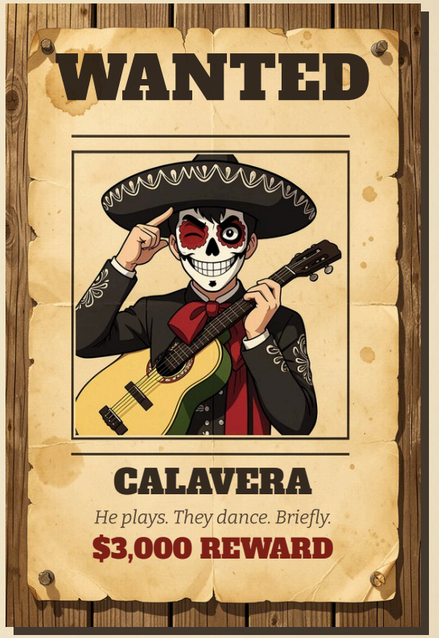

What the store page and the ads will look like

Concept art painted on our own server from the title-screen heroes and the game's creatures: a feature graphic, a trailer's end card, a wanted poster for every hero.

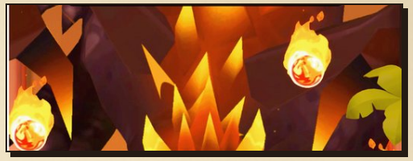

The Drifter alone against scorpions of every size: the store's feature graphic

A wanted poster for every hero: store screenshots, social posts, a sticker sheet. The words are set on the painting, so every hero's flavour line fits.

The action loop: steer, collect, choose, grow

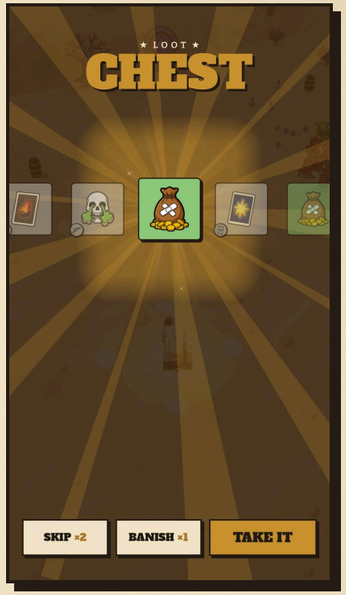

In the recorded 17-minute phone run (No. 09): 45 level-ups, 72 chests, 16 structures and 9 totems, so something to pick or open every 7.5 seconds.

Pick 1 of 3

A mutation level-up

A chest's reel

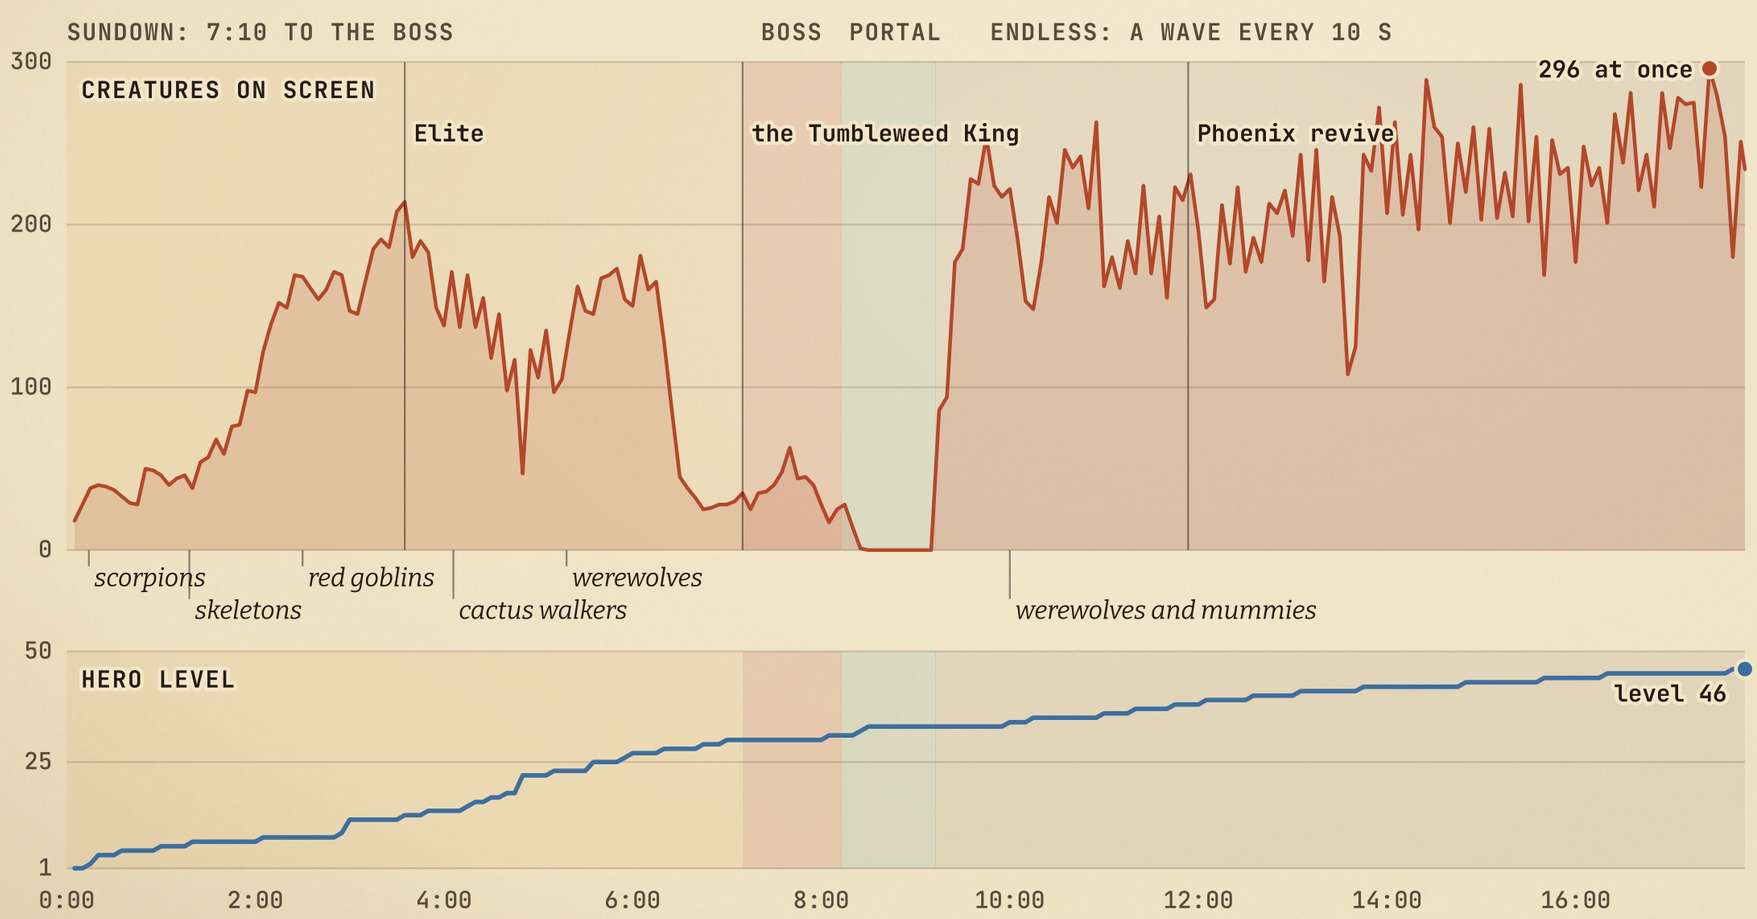

OUT

At the stage's end: **the boss**. Then 60 seconds to walk into the portal and **extract** with the gold, or stay for **Endless**: a big wave, then a tougher one every 10 seconds.

NO. 09 · A REAL RUN

17 minutes on a Pixel 8 Pro, second by second

One recorded run from the game's own telemetry: the Drifter clears Sundown, kills the Tumbleweed King, then stays for Endless.

9,531
creatures killed

296
on screen at once, at its peak

52
Endless waves survived

46
hero level reached

16.7 ms
median frame time: 60 fps on a phone

Eight heroes, eight ways to survive

Each brings a start weapon, a favourite item, a trait that grows every level, perks and a hero mutation. The Drifter is free; the others are earned with a quest, then bought with gold.

Astro
GRAVITY GUN
Space Suit: +2 max HP a level, heals on level-up
300 gold

Ironwood
SPEAR
Enduring: regenerates faster every level
300 gold

Solenne
SUN SCEPTER
Magic Hour: her burns and slows last longer
Quest, then 1,500

The Drifter
REVOLVER
Long Road: +1% crit chance a level
Free

Calavera
GUITARRA
Last Dance: +1% damage a level
Quest, then 300

Fadeaway
BASKETBALL
Footwork: evades more every level
Quest, then 1,750

Jeżyk
FRISBEE
Full Tilt: unstoppable while unhit
Quest, then 2,000

May
BIG MOUTH
No Time: cooldowns shrink every level
Quest, then 2,500

CONCEPT ART PAINTED FROM THE EIGHT TITLE-SCREEN CUT-OUTS; PRICES IN GOLD EARNED IN RUNS

Sundown, Nightfall, Blood Moon

Each stage is its own run from level 1 on Red Canyon, longer and meaner than the last, and each ends with its boss.

Sundown

7:10 · EASY

BOSS

The Tumbleweed King

Rolls in with a court of tumbleweeds and stomps the ground in three hops.

Nightfall

10:00 · MEDIUM

BOSS

The Gila Grande

Burrows, waits three seconds, erupts where you were about to be, and rains cactus.

Blood Moon

13:00 · HARD

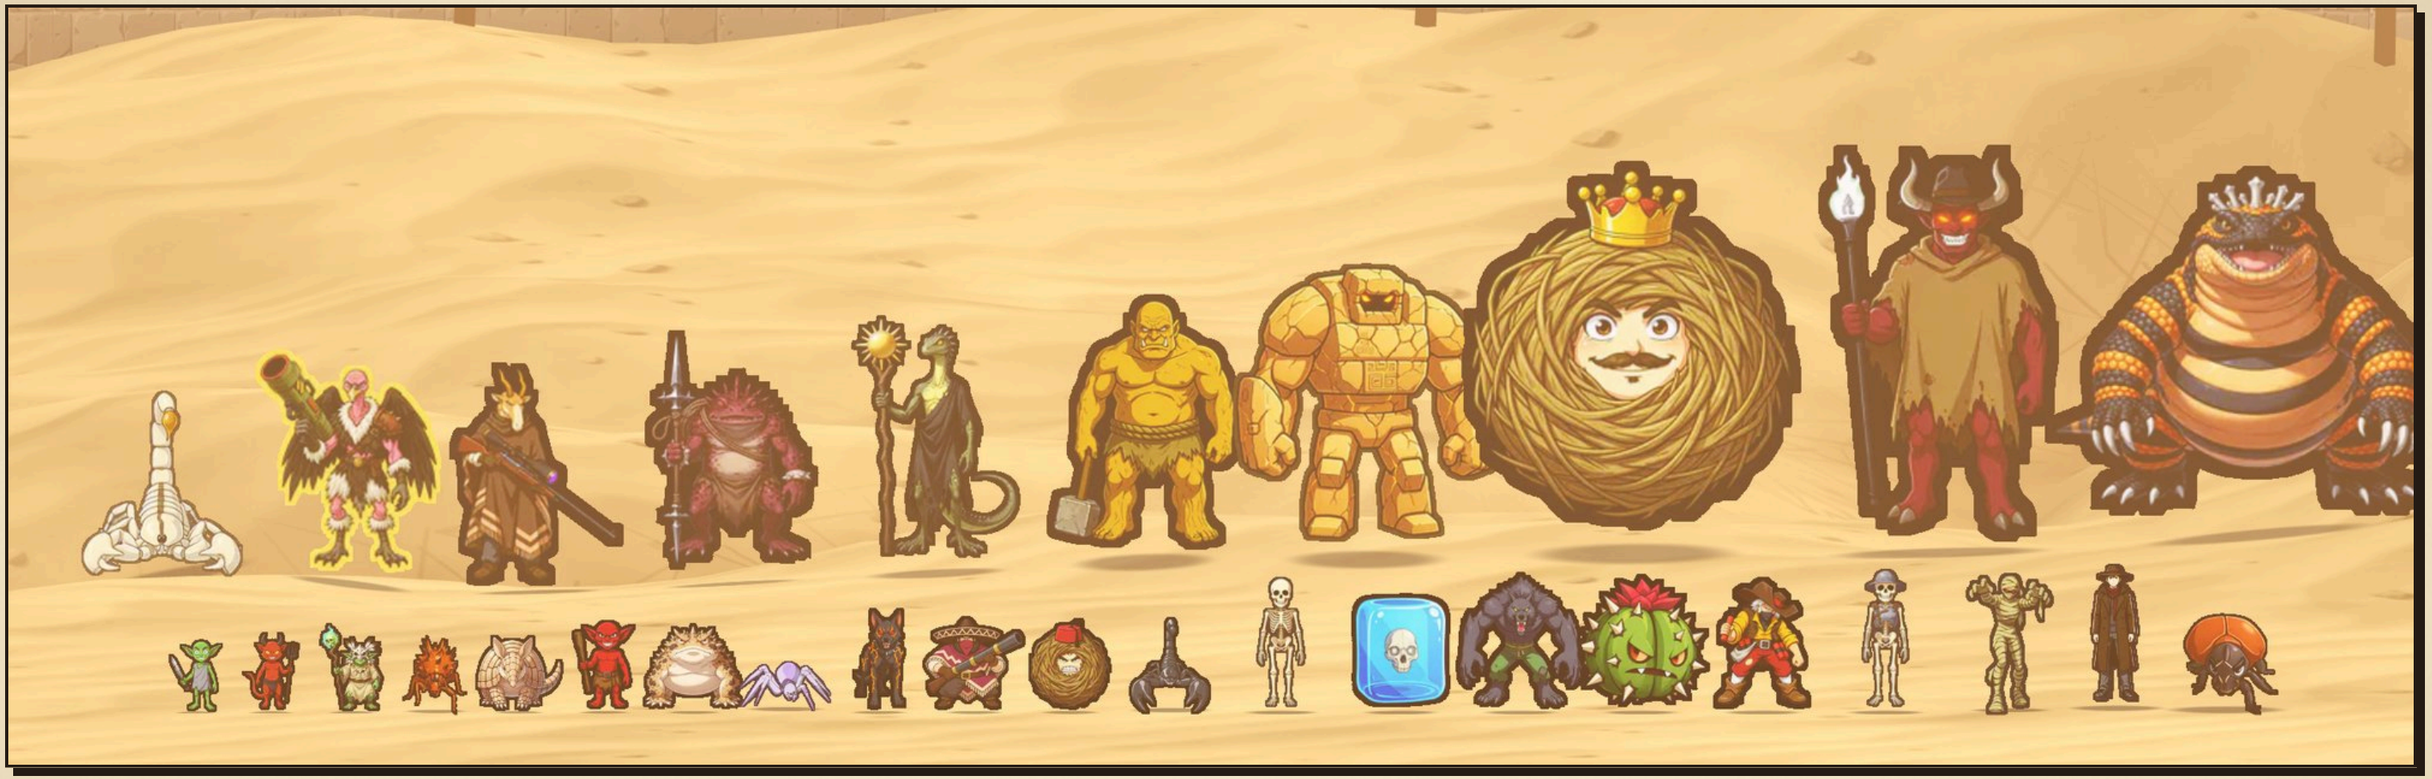

BOSS

The Brander

Hell opens: a red ground, its own crowd, and a ring of fire that closes in.

TOP: CONCEPT ART PAINTED FROM THE GAME'S CREATURES AND BOSSES. BOTTOM: EACH BOSS IN THE ENGINE.

28 creatures, each with its own brain

Every creature Red Canyon sends, to scale and in its played look; the Drifter stands among them for size

Brains, not stats

Chasers, flockers, chargers, kamikazes, kiters, casters, healers, ambushers and artillery: each creature behaves, not only hits.

Specials

A rare creature glows in its own colour: 15 times the health, a 35% chance of a chest. The weapons pick it out first.

Elites and odd jobs

Four Elite modifiers (explosive, shielded, speedy, splitter), a sniper with a map-wide beam, a harpooner that reels you in.

Many looks

Most creatures have several painted looks (white, gold, rose shells for the night): 99 creature looks so far.

Five weapons, five cards, and no cap on the rest

24

Weapons, five at a time

Each levels to 5 and has three path mutations (an Element, a Volume, a Motion), offered as mutation level-ups at set minutes. Level 5 with all three paths evolves at the next chest: 24 evolutions.

21

Cards, five at a time

Tarot lines (The Sun, The Tower, The Hydra) that level to 4 and then rise: "The Sun Risen".

34

Passive items, no cap

Beer, a Pocket Watch, Snake Oil: each climbs the rarity ladder one rung an upgrade, up to Legendary and an Evolved form.

9

Hero mutations

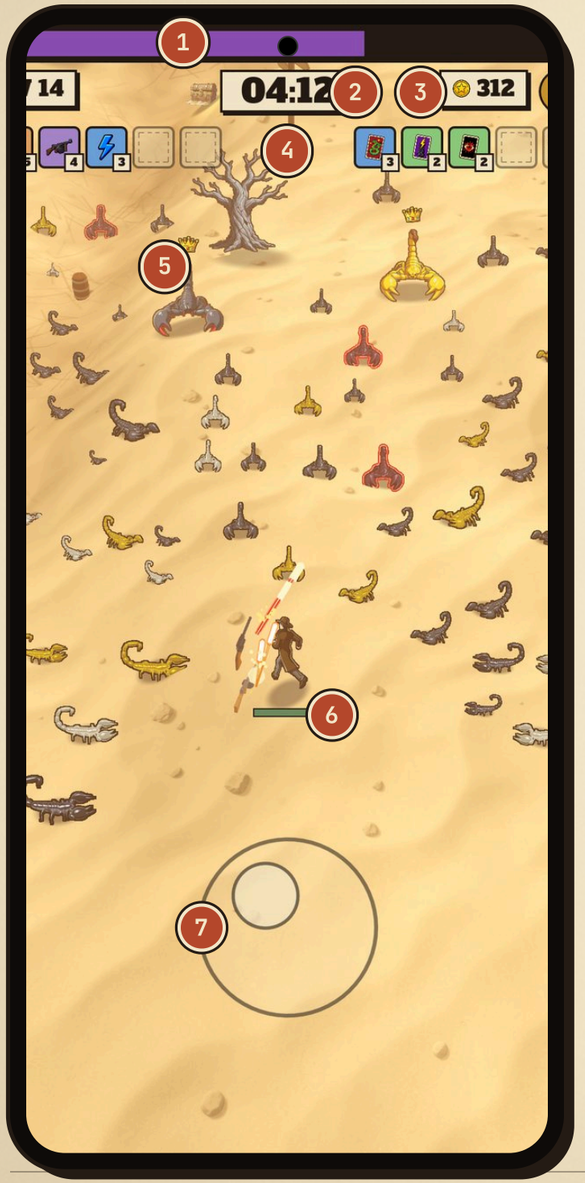

A hero's own twist on a favourite weapon: the Drifter's Fire in the Hole, Calavera's Danza Macabra, May's Trigger Happy.

60M+ loadouts for any hero (four more weapons from 18 or 19, five cards from 21) before a single passive item, mutation or evolution.

COUNTS: THE CONTENT FOLDERS ON 26 OCTOBER 2026, ONLY WHAT IS IN PLAY

Everything happens under one thumb

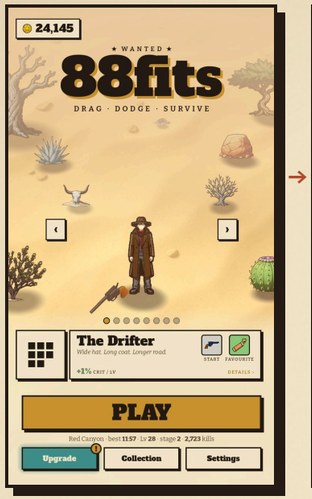

1. **The XP bar**
   Fills with every gem; when it is full, three cards are dealt.
2. **The stage clock**
   Counts to the boss: 7:10 in Sundown. The level sits to its left.
3. **Gold and pause**
   The run's purse, and the only button on screen.
4. **Five weapons, five Cards**
   Each with its level on the corner, always in view.
5. **Specials and Elites**
   A special glows in its own colour, an Elite wears a crown; the guns pick them first.
6. **The hero**
   His health bar under him; being hurt jiggles the bar, never the screen.
7. **The stick**
   Appears wherever the thumb lands; lift to stop.

The rules we hold to

- No aiming, no fire button, no jump button.
- The joystick appears wherever the thumb lands; lift to stop.
- The camera never rotates: the stick maps straight to the screen.
- The hero's hurt jiggles the health bar, never the screen.
- Cards are full-width and sized for a thumb.
- Touch is read raw, never as a mouse, and every control is proven by a scripted finger: 1,754 controls on every build.

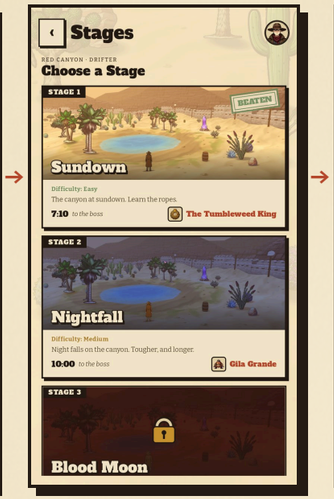

Every run pays, even a death

Title

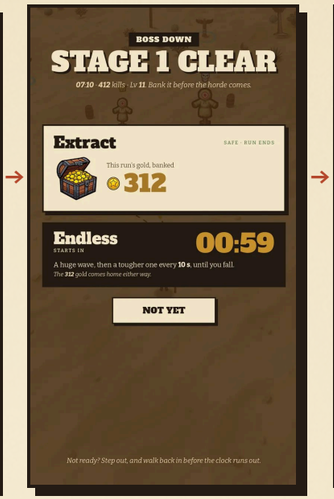

Pick a hero

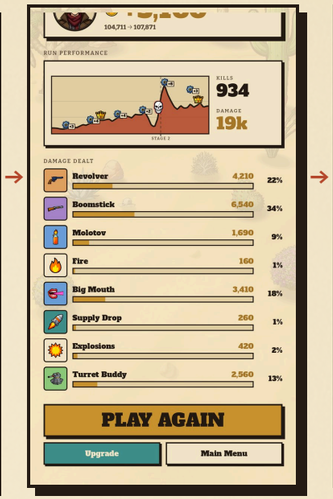

Pick a stage

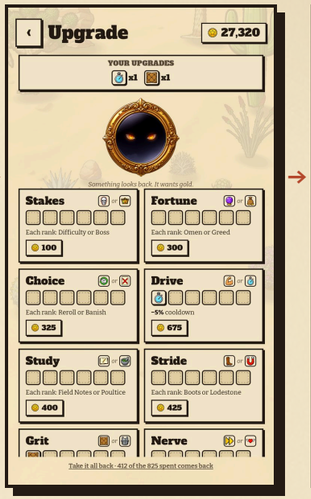

The run

Extract or Endless

Results

Upgrade

Collection, quests

Bank gold

Every run's purse comes home, a death too; Elites and bosses pay five times.

→

Upgrade

Eight talents, two forms each, six ranks: Grit, Stride, Fortune, Stakes…

→

Unlock

30 quests open 5 heroes, 11 weapons and 12 passive items.

→

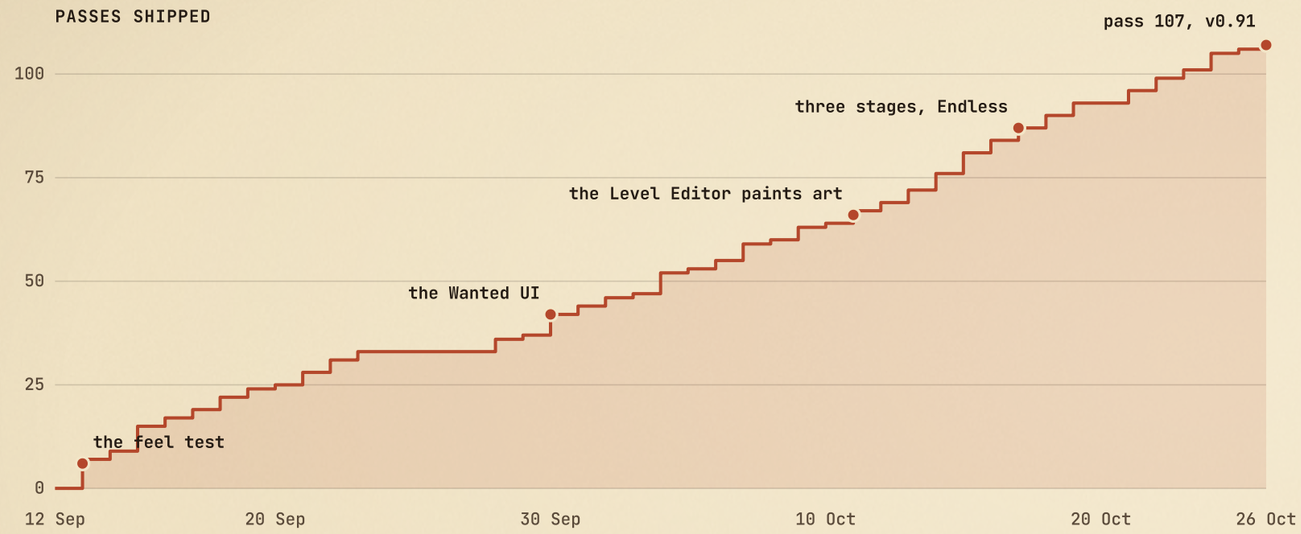

Go deeper

Beat a stage to open the next; raise Stakes for more gold and XP.

↺ AND BACK TO THE TITLE, ONE STEP STRONGER

No energy, no timers, no gacha: every unlock is earned in play. The Collection shows only what you have met, so it fills as you explore. On the map, totem poles, a shop, a stranger's deals and teleports give each run its own detours.

107 passes in 45 days, played on a phone after every one

141
generated sound effects

30
quests

9
live telemetry boards

One designer steers from a phone; code, art, sound and tests are made with Claude and local AI models. Each pass ends with every test green and a signed Android build plus a PC build in Google Drive, so the newest game is always one tap away.

1. **The designer's list**
   Typed on the phone after a play session: what to add, what felt wrong

2. **Lanes in parallel**
   Code, art, data and tools split into briefs, each lane on its own files

3. **Every check**
   2,365 tests, a smoke run, the arena check, 1,754 controls touched

4. **On the phone**
   A signed Android build and a PC build in Google Drive; the history and balancing logs updated

PASS DATES: DOCS/HISTORY.MD AND THE PROJECT LOG; COUNTS: CONTENT FOLDERS, 26 OCTOBER 2026

Any 3D model becomes a painted, animated creature

Our own method, here on the Bull Beetle: the model's own walk is rendered as depth, and the painting follows it frame by frame.

IN

A rigged rhino-beetle model with its own walk clip.

2 Our Blender tools render it as clay in the five views the game needs.

3 Its walk clip, legs swung wider to read at game size, rendered as depth frame by frame.

4 Flux.2 repaints the side view in our house style; three seeds, one picked by eye.

5 The other views are painted to match the pick.

6 Wan 2.2 walks each painting along its depth video; mirrored, the views cover every direction.

OUT

Every painted frame follows its depth frame: the beetle walks exactly as the model does.

The Puppet: a painting becomes its own 3D guide

For heroes: May's painting is turned into a rigged 3D body, so any motion fits her proportions before the video model paints it.

1 · PAINTING

May as painted for the game

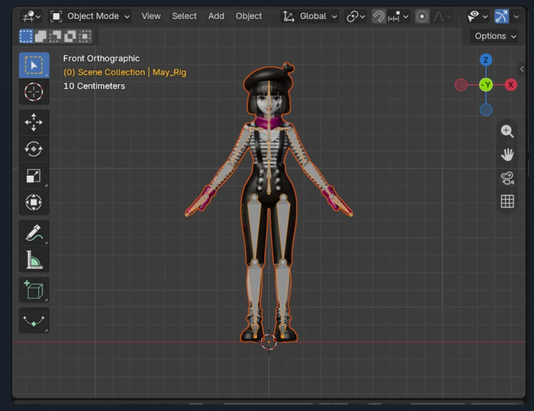

2 · A-POSE

Redrawn arms-out from three sides

3 · 3D BODY

Hunyuan3D 2 builds one body from the three drawings

4 · RIG

A Blender skeleton with Mixamo bone names

5 · MOTION

A stock Mixamo run, retargeted onto her body

6 · GUIDES

Her own stick figure and depth, frame by frame

7 · PAINTED RUN

Wan 2.2 paints her run on those guides

One model, many pictures: icons and looks

Icons from our own 3D

the gun in the hand and the gun on the card are the same gun

1 · RENDER

The game's own model, from the icon's angle

2 · SEEDS

Flux.2 paints four in our style; one is picked

3 · ICON

Keyed, outlined: the card's icon

4 · EVOLUTION

The same render, gilded: the Chicago Typewriter

One creature, many looks

painted again, or recoloured frame by frame; the designer picks which one plays

The Dune Scorpion Elite in two of its painted looks

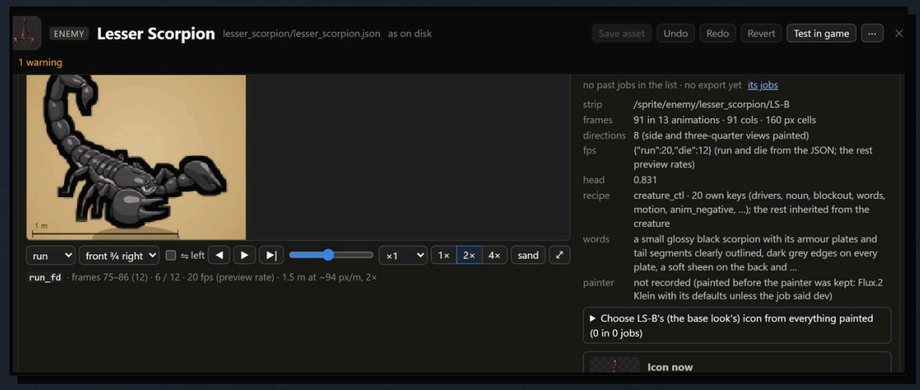

The Bull Beetle recoloured for the night: no new painting

The Level Editor: the whole game on one page

The Timeline: Sundown's crowd, challenge and make-up, second by second, drawn from the rows a designer edits

A look playing, with the recipe that painted it

An art request: budgets, workflows, candidates

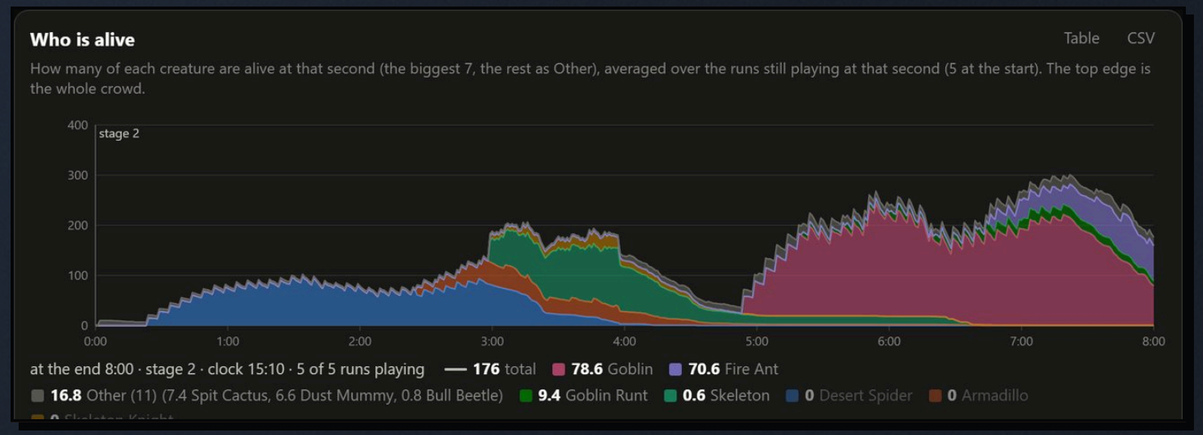

- Every stage's timeline: creature rows, waves, events and curves.
- Every creature, hero and item as a form, its animations playing.
- Art queued to the local AI, checked by a vision model, fixed frame by frame.

Bots that play it, data that judges it, a build in one step

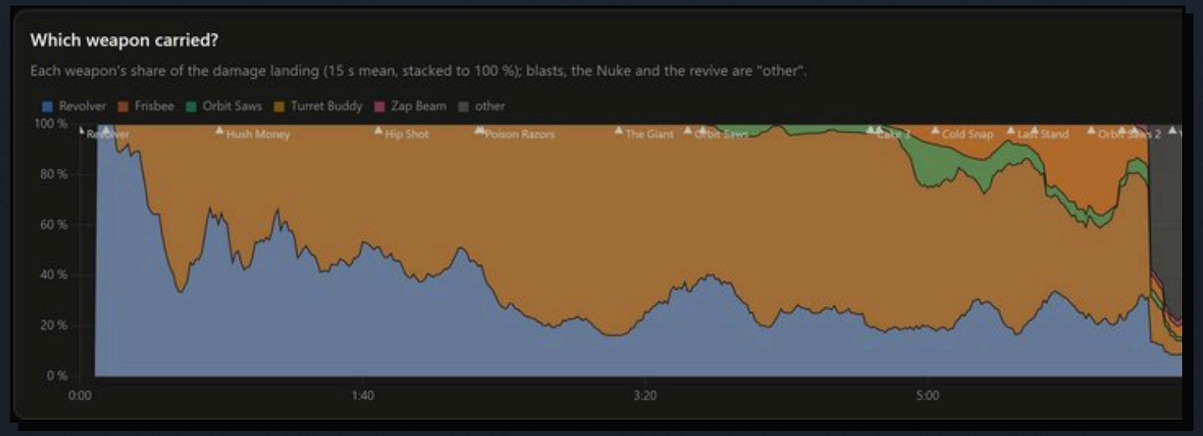

The Watch

A bot plays the real game in a window while its numbers, charts and decisions update live. Press T and play it yourself.

The run sim

Five bot runs at once, every second averaged into charts: a balance change is measured before anyone plays it.

Telemetry

Every player's run lands in our dashboards: which weapon carried, how the build grew, what hurt the hero.

```
$ bash tools/ship.sh
import, data, parse check ok
Executed test cases : (2365/2365)
smoke_run: OK after 29s
arena_check: ARENA OK
touch_audit: 1754 of 1754 controls
  answered a finger; 0 failures
signed release APK ok
copied to Google Drive:
  88fits builds/88fits.apk
  88fits builds/88fits.exe
```

One step to the phone

One command runs every test, signs the Android build, makes the PC build and drops both in Google Drive.

NO. 22 · SUMMARY

88fits, in three lines

The game

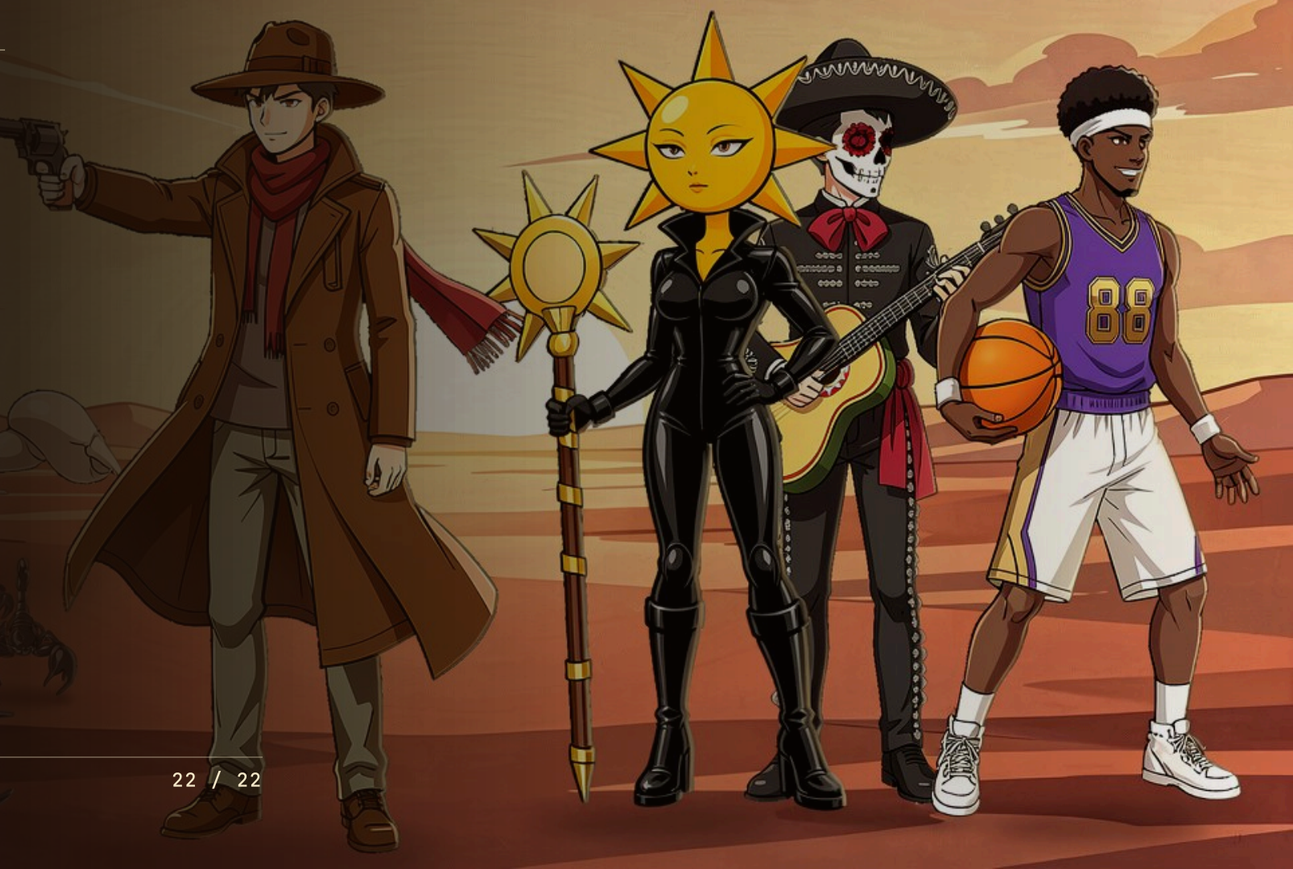

Megabonk's run, held upright under one thumb: a crowd, three cards, a build that evolves, a boss, a portal.

The content

8 heroes, 24 weapons, 28 creatures, 3 stages and their bosses, all data, all painted by our own pipeline.

The machine

A new creature in an evening, a tested build on the phone after every change, real players' runs on our dashboards.

PROPOSED NEXT STEPS

- The market test already planned: a Play store listing, three ads, a read of install price and day-1 and day-7 retention, from $500.
- The production build for the store, which the pipeline already makes: no debug options, only the art the game shows.
- More heroes, creatures and maps from the same pipeline, steered by what the test says.
